● Theft, Burglary And Break-Ins	17%	↑ 1%-pt
● Drugs	15%	↑ 1%-pt
● Streets And Traffic	14%	↓ 1%-pt
● Violence	11%	↑ 1%-pt

How are the concerns measured?

We categorize hundreds of raw comments we receive daily about resident's main concerns. These comments are in response to the following question: "What is the number one issue or problem in your local area that you would like the police to deal with"? Categorization of the responses allows you to understand over time what the residents' main concerns are and to track trends in resident priorities. For more nuance and insight, responses are also assigned a sub-topic visible in your comment feed.

This report contains law enforcement sensitive data, and confidential business information.

Benchmarking Data

● Albuquerque - PD

■ Cohort

▲ National

National Benchmark Surveys: The Blockwise National Benchmark Survey is conducted each quarter and reaches thousands of residents from hundreds of communities across the United States.

The survey content for each matches the same questionnaires we administer to our client communities. The national scores are adjusted for your demographics in order to give a sense of what the scores would look like if the whole country looked like your community. By making these adjustments, we minimize differences between the national score and your score. **Cohorts:** To provide information to our clients on how residents in similar communities feel, we create a score at the "cohort" level. A cohort is a group of similar communities, based on demographics from the Census Bureau, including population density, age distribution, race/ethnicity distribution, gender, and median income. By using this approach rather than focusing just on size or geographic area, the cohorts are more relevant for each client.

Quarterly scores represent month-average scores within a quarter. We calculate an average score based on the monthly scores for the quarter.
