VOLUME I

Executive Summary

Acknowledgments	I
Background.....	II
Facility Condition Assessment.....	III
Space Needs	IV
Concept Design	V
Estimate of Probable Construction Cost	VI

Chapter 1: Existing Site and Facility Review

Background.....	1.1
Existing Transit Vehicle Flow.....	1.3
Exterior Bus Parking and Circulation	1.6
Maintenance Building.....	1.9
Fuel Island	1.25
Wash Building.....	1.27
Administration / Operations Building	1.30
Old Bus Garage.....	1.31
New Bus Storage Building	1.33
Old Sun Van Building	1.35
Historic Significance	1.36

Chapter 2: Design Criteria

Section 1: General Considerations

Acknowledgments	2.1.1
Background.....	2.1.2
Introduction	2.1.3
Methodology	2.1.4
Daily Activities.....	2.1.6
On-Site Traffic Movement.....	2.1.7

Section 2: Space Needs Program

Introduction	2.2.1
Space Needs Program.....	2.2.3

Section 3: Functional Requirements

Introduction	2.3.1
Maintenance (Offices)	2.3.2
Maintenance (Bays & Shops)	2.3.17

TABLE OF CONTENTS

Materials Management	2.3.60
Fuel & Wash	2.3.69
Facility Maintenance	2.3.88
Agency Vehicle Parking	2.3.98
Private Vehicle Parking	2.3.100
Other Site Areas	2.3.101
Section 4: Site & Building Requirements	
Codes, Standards, and Permits	2.4.1

APPENDIX C: COMPONENT DATA

The Component Rebuild Analysis shown on the next pages shows the components rebuilt at each facility each year since 2012. The amount of rebuild time per year is shown by facility and for the entire system based on the average rebuild time shown. This analysis suggests that the Component Rebuild should be located at one facility. It is recommended that Component Rebuild be located at the Daytona Facility due to its layout and state-of-the-art shop equipment.

The table below shows the number of engines and transmissions currently stored at each facility. Given the lack of space on the Yale Facility site and the recommendation that Component Rebuild be located at the Daytona Facility, it would be appropriate for all engines and transmissions to be stored at Daytona.

The table above indicates that the Daytona Facility could accommodate the entire existing fleet of 130 fixed route 40' buses, 24 fixed route 60' buses, and 69 paratransit vehicles if CNG fueling was added to the site. This provides ABQ Ride a unique opportunity to upgrade the Yale Facility before the projected fleet expansion beyond the year 2020.

EQUIPMENT INVENTORY LIST

The following is an organized list of the existing equipment inventory at the City of Albuquerque, New Mexico's Yale Maintenance Facility, as well as corresponding photographs of that same equipment, which can be relocated and re-used in any future facility configurations. The equipment inventory list is organized facility location, and the photographs are listed numerically by mark number in accordance with the list.

EQUIPMENT LIST

INTRODUCTION

This Equipment List is organized as a working document to be updated as the design of the facility progresses. The purpose of this document is to identify types and quantities of new equipment items necessary for facility operation. Equipment denoted in this list is representative of the needs of each functional area of the facility as they were discussed with ABQ Ride staff members. Equipment is listed by function area with the following information:

Mark. All identical equipment items are assigned the same number. The Equipment Mark Number coordinates this list with equipment layout drawings and specifications. A five digit numeric Mark Number indicates an existing item to be moved from the existing facility.

Description. Description of equipment item.

Price. Estimated unit price not including installation. Letters under "price" indicate the location of the item in the existing facility at the time of the inventory.

Qty. Quantity of equipment item.

Ext. Extended Price. Equals Price times Quantity.

Area. Overall width and depth, respectively, in inches unless otherwise noted.

Remarks. Includes requirements to be considered during detailed design.
